Professional Summary

Forward Deployed Engineer candidate pursuing B.Tech in Computer Science (Blockchain Technology) with experience developing AI-powered and full-stack applications using Python, Java, React.js, Node.js, FastAPI, and PostgreSQL. Strong foundation in Data Structures, Algorithms, Distributed Systems, REST API development, Microservices, and System Design. Passionate about solving customer-facing engineering challenges, integrating enterprise APIs, debugging production systems, and delivering scalable software solutions in cross-functional environments.

Education

Parul Institute of Engineering and Technology 2023–2027
B.Tech in Computer Science Engineering (Blockchain Technology) CGPA: 7.49

Technical Skills

Programming Languages: Java, Python, JavaScript, C++, SQL, Solidity

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS, Bootstrap

Backend: Node.js, Express.js, FastAPI, REST APIs

AI/ML: Generative AI, RAG, Prompt Engineering, AI Agents, Time-Series Forecasting

Cloud & DevOps: Docker, Kubernetes, AWS (Fundamentals), Azure (Fundamentals), GitHub Actions, CI/CD, Linux

Databases & Messaging: PostgreSQL, MongoDB, MySQL, SQLite, Redis, Kafka

Developer Tools: Git, GitHub, VS Code, Postman

Core Concepts: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, System Design, Distributed Systems, Microservices, Event-Driven Architecture

Experience

Lab Tech Support – CV Raman Center, Parul University Feb 2026–Mar 2026
- Managed infrastructure supporting 3000+ systems during GATE and JAM examinations.
- Configured domains, networks and systems ensuring reliable operations.

IT Intern – System Support Cell, Parul University Sept 2025–Feb 2026
- Maintained university IT infrastructure and enterprise devices.
- Supported networking, troubleshooting and deployment activities.

Projects

DemandFlow AI – AI Powered Demand & Supply Intelligence Platform
- Built an enterprise-grade AI platform for demand forecasting, inventory optimization, and business intelligence using FastAPI, Node.js, PostgreSQL, Kafka, and Redis.
- Designed scalable microservices architecture supporting real-time analytics, recommendation systems, and event-driven workflows.
- Developed forecasting pipelines, operational dashboards, and intelligent decision-support modules.

Enterprise RAG Knowledge Assistant
- Developed a Retrieval-Augmented Generation (RAG) platform using Python, FastAPI, vector databases, and semantic search workflows.
- Built intelligent document retrieval and contextual question-answering pipelines for enterprise knowledge management.
- Implemented scalable API architecture supporting AI-powered search and knowledge synthesis.

Achievements

- Solved 350+ LeetCode problems with Contest Rating of 1620.
- Active on Codeforces, CodeChef and HackerRank.

Certifications

- Blockchain and its Application – NPTEL
- Artificial Intelligence: Concepts and Techniques – NPTEL
- Computer Network and Internet Protocol – NPTEL
